

Thymosin Alpha

Thymosin Alpha-1 is a naturally occurring thymic peptide of 28 amino acids. Thymosin Alpha-1 has been known as an excellent immune modulator. Thymosin is a small protein produced naturally by the thymus gland which stimulates the development of disease-fighting T cells. The thymus is an integral part of your immune system, where individual T-cells are made to respond to the millions of bacteria, fungi, or viruses that could invade your body. Commonly prescribed for the treatment of chronic viral diseases, Thymosin Alpha has also been shown to increase innate immunity factors and help fight against harmful autoimmune processes. It is given to help control inflammation associated with chronic diseases, which can cause excess fatigue.

Content & Potency: 3mg/ml subcutaneous injection provided in a 5ml vial

Suggested Dosage: Inject 0.15 ml (0.45 mg) subcutaneously daily for 30 days.

*****Do not flush unused medications or pour down a sink or drain. *****
